

# Täringvara Sõnade Nimekiri

Täringvara abil on võimalik luua turvalisi ja kergelt meeldejäätavaid salafraase. Selle jaoks on vajalik vähemalt ühte kuuetaolist täringut. Kasutada võib ka mitut täringut, et veeretamiste arvu vähendada. Kui Täringuid saadaval ei ole, siis võib ka kasutada selleks virtuaalseid täringuid või juhuarvu generaatorit. See aga ei ole soovitatav.

Esmalt tuleb otsustada, mitmest sõnast peaks salafraas koosnema. Soovitatav oleks kasutada kuuesõnalist salafraasi igapäevasteks tegevusteks. Kriitilisemates kohtades on ka soovituslik kasutada seitset või rohkemat sõna. Täringvara salafraaside turvalisusest on võimalik lähemalt lugeda [www.täringvara.ee](http://www.täringvara.ee).

Salafraasi ühe sõna leidmiseks tuleb täringut veeretada viis korda. Saadud täringu silmade järgi on võimalik nimekirjast otsida vastav sõna. Näiteks kui veeretada täringu numbrid 2, 6, 5, 3 ja 1, on salafraasi esimeseks sõnaks 'kumbki'. Tegevust tuleb korrata, kuni salafraasis on kokku soovitud arv sõnu. Salafraasi sõnad tuleb eraldada üksteisest tühikuga. Vajadusel võib kasutada ka teisi kirjavahemärke.

**NB!** Sõnu ei tohi omavahel kokku liita ilma kirjavahemärkideta.

## Näide

Oletame, et meil on vaja 6 sõnalist salafraasi. Selle jaoks on vaja 6 korda 5 ehk 30 täringuveeretust. Oletame, et täringuveeretused olid järgnevad:

2, 5, 5, 6, 6, 1, 4, 2, 5, 6, 1, 1, 2, 1, 3, 3, 1, 5, 3, 6, 5, 6, 4, 5 ja 2.

Viistes gruppides oleks see

2 5 5 6 6      1 4 2 5 6      1 1 2 1 3      3 1 5 3 6      5 6 4 5 2.

Otsides nimekirjast välja nende numbritele vastavad sõnad saame salafraasiks  
**koonal eesti aedik kumbki las umbri**
